DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3, 4, 8, 18 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The scope of claims 3, 4, 8, 18 and 19 is unknown because the scope of the term "about" is indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Haas Isohop (www.gne22.kial.pipex.com/isohop.html).

Hass Inc. provides a product called Isohop, which is also used by applicant in Example 5 of the instant application. Isohop is a potassium salt of iso-alpha-acids in aqueous alkaline solution buffered with potassium carbonate. Isohop contains 20% or 30% w/v iso-alpha-acids. Because Isohop is disclosed as being applicant's invention, it is inherent that the addition of

Isohop to beer (a process medium) anticipates the rejected claims. Haas teaches that the hop additive can be metered by injection into the beer stream, i.e., continuously. It is also shown that, depending on how much bitterness one wants the final beer to be, the final concentration can be between 3.75 to 10 ppm.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11, and 14-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admissions (pages 2-4) in view of Hass.

Applicant admits that “[s]ome distilleries [use hop acids] to control bacteria problems.” Further, the hops are converted to isoalpha acids by boiling the hops. Applicant does not admit that hop acids added are alkali salts of hop acids.

Haas teaches that which is notoriously well known about Isohop. Applicant is adding what is regarded as a well known preservative, i.e., alkali salts of hops, for it art recognized benefit, i.e., controlling bacteria. It would have been obvious to those of ordinary skill in the art to add the Isohop of Haas as the bacterial control agent in a yeast fermentation process as admitted by applicant.
